

Dear Home Owner,

Fetsko Lawn Care plans to start the annual aeration and seeding of the lawn areas tomorrow or Thursday. They do not blow the driveways or sidewalks in order to avoid blowing the seed away from the edges. Please forgive the mess and trust that it will not remain that way for an extended period of time.

After the lawn is seeded it must be kept moist with daily watering until the new seedlings reach 2" tall and then water every other day until mid December. We ask that all home owners assist by hand watering their lawns as described so that we can maximize the results of this effort. Also, please be aware that the lawns will not be mowed for at least two weeks so that the seed has an opportunity to germinate.

Please contact us if you have any questions.

Thank you,

David Robbins
